

# Growing Muscles

**Help us understand how your child's muscles grow**

We are investigating the shape, size and structure of the calf muscles in children with and without cerebral palsy. We will be using 3D ultrasound to look at your muscles as they grow.

If you have a child with cerebral palsy between the ages of 2 and 5 years, you both could help us.

Further information please contact **Dr Lee Barber**  
Queensland Cerebral Palsy and Rehabilitation Research Centre
